Introduction

- This is a part 1 project of Database-Administrator. It includes 2 small parts:
 - Part 1: Source code of Database-Administrator in c#.
 - Part 2: script oracle to create database.
- This project allows you to manage the database. You can grant, add,delete, update, search, and view the information of users, tables. You can also view the information of the database.

How to run:

- Run script oracle in sql developer to create database.
- Open the project in Visual Studio 2022.
- Then, run the project.
- (note: visual studio 2022 generates a error App.g.cs file, so you need to delete word "App" in "App.App" of the file App.g.cs to run the project, unless you will get an error.)

How to run exe file:

- The file **App.exe** in the folder **Database-Administrator\App\bin**.
- Double click on the **App.exe** file to run the program.
